WATER MENU

---

**Water is essential to life.** But are all waters the same? The answer is no. Martin Riese, General Manager and Water Sommelier of Ray's & Stark Bar, has curated a water selection that demonstrates the difference in taste between twenty different waters sourced from various regions of the world. Terroir affects water just like wine. Let us take you on a global journey of water.

“Water is sometimes sharp and sometimes strong, sometimes acid and sometimes bitter, sometimes sweet and sometimes thick or thin, sometimes it is seen bringing hurt or pestilence, sometimes health giving, sometimes poisonous. It suffers change into as many natures as are the different places through which it passes.”

- Leonardo Da Vinci

*Our Selection*

## BERG

Berg Water is a glacial water from Western Greenland. As massive icebergs break off 15,000 year old glaciers, they are harvested and melted under strict purity guidelines to preserve the water's natural qualities. The result is a water virtually untouched by man and with little to no trace of minerals

## ISKILDE

“Iskilde” means “cold spring” in Danish. This artesian spring was discovered in the Mosso Conservation area in a remote part of the Danish lake highlands in 2001 by a retired insurance broker and his wife.

The aquifer from which the spring flows lies 150-180 ft below the surface and is covered by alternating layers of quartz-sand and hard clay. Uniquely, the water maintains a high content of oxygen that creates an unusual bubbling effect upon opening a bottle.

## FIJI

FIJI water begins as rain falling on the tropical island of Viti Levu's north coast and is drawn from an artesian aquifer that lies hundreds of feet below the edges of a primitive rainforest. As it filters down through layer after layer of ancient volcanic rock, the natural filtration process introduces the mineral silica which contributes to Fiji Water's distinctly soft, smooth "mouthfeel" (a professional tasters' term that refers to a liquid's taste and texture). That distance and isolation is part of what makes FIJI water so pure and rich in taste.

## BADOIT

Badoit is naturally carbonated with tiny bubbles, the type found in fine champagne, that give this water a light and sophisticated taste despite the TDS (total dissolved solid) content. The water rises through granite from a thermal spring in Saint Galmier, a town in the Loire region of France. It pairs well with sweet wine and cheese.

## EVIAN

This water begins as rain and melt-water filtering down through sandstone and gravel in the French Alps. It takes 15 years for the water to pass through the mountain before rising to the spring, along the way it picks up calcium and magnesium producing a slightly bitter, unique taste that you will either love or hate.

## PERRIER

120 million years ago, on the Languedoc plain in southern France, rainwater seeped into the ground as volcanic gas rose up to the surface. When the water and gas met, they both forced their way up through the open fissures in the limestone and gushed with the release of carbonic gas. The water bubbled as if boiling, earning this place the name, “Les Bouillens”, meaning ‘boiling waters’ in French.

## ACQUA PANNA

The Acqua Panna source is nestled among beech wood and chestnut forests on the slopes of Mount Gazzaro, 3,700 feet high in the pristine Apennines Mountains of Tuscany. This serene, vast, unspoiled natural reserve, brings forth a luminous water with neither the slightest effervescence nor odor. The first sip has a pleasant, fresh taste due to the low acid and low mineral salt content. Not without structure, it imparts a taste that is as light as feather, pleasantly soft and velvety.

## S. PELLEGRINO

S.Pellegrino flows naturally from a spring in Val Brembana, in the foothills of the Italian Alps, in the territory of San Pellegrino Terme, near Bergamo (Lombardy). The water arrives at the surface naturally enriched with mineral salts. S.Pellegrino water has a lot of presence thanks to its lively and long-lasting bubbles, which feel creamy on the palate and a slightly salty taste, well-balanced with acidity to give an overall refreshing, thirst-quenching feel.

## SOLE

The spring Fonte Sole is located at the heart of the village of Nuvolento in the Lombardy. The well-balanced group of minerals in this water is derived from a natural filtration process that occurs as this water works its way through varying geological rocks and minerals to the well-protected, underground source.

## VOSS

Voss Artesian water was one of the first companies to combine design with water. The cylindrical packaging, famously designed by Neil Kraft (formerly chief design artist for Calvin Klein), added a premium element to the water market in the United States which set the stage for water to be seen as more than just a beverage, and to become the lifestyle choice that it is today.

## HILDON

The distinctive terroir of Hildon Natural Mineral Water comes from deep beneath the chalkhills of the beautiful Hampshire countryside. This chalk environment filters the water to exceptional purity and embodies it with a specific composition of minerals characteristic of the geological strata it flows through. This 'fingerprint' gives this water a taste and composition which is uniquely Hildon and a favorite of the Royals.

## LLANILLYR

Llanllyr is a premier bottled water that has been drawn since 1180 AD from the same springs beneath certified organic farmland in Llanllyr, Talsarn, in West Wales. Whether it can be classified as organic water or not is a moot point. Its clear, refreshing taste and stylish presentation have made it the water of choice for many prestigious restaurants, hotels and events in London and throughout the UK.

## BEVERLY HILLS 9OH2O

Inspired by the crafting of champagne and fine spirits, a team of fine dining experts, including the world's foremost water sommelier Martin Riese, created Beverly Hills 9OH2O, the world's first Sommelier-Crafted Water™. Pristine spring water from the Northern California Mountains is crafted with a perfect balance of natural minerals, resulting in a 7.5 pH alkalinity, and a silky smooth, incredibly crisp and exceptionally fresh taste profile. These extraordinarily unique characteristics make Beverly Hills 9OH2O the first ever water to perfectly pair with fine foods, wines, and spirits. Considered “the champagne of waters”, 9OH2O is made available in limited editions of 10,000 individually numbered diamond-like glass bottles.

## SARATOGA

Steeped in legend and lore, and from deep beneath the lush Adirondack foothills comes one of the few naturally carbonated springs in the country. Drinking and bathing in the waters of Saratoga Springs was regarded as medicine by the Mohawk and Iroquois Indians, who celebrated its strong healing and curative properties.

## WAIAKEA

Waiākea volcanic water originates in Hawaii on the pristine snow capped peak of the active Mauna Loa volcano in one of the purest environments on Earth. The water is then naturally filtered through 14,000 feet of porous lava rock which enhances it with life sustaining minerals before finally emerging as delicious and pure volcanic water.
